## 7.6: Pascal's Triangle and the Binomial Distribution

Example) A basketball player has a $65 \%$ chance of making a 3-point shot. They take five 3-point shots. Complete the distribution table to determine the probability that the play makes $0,1,2,3,4$, or all 5 shots.
$\qquad$
$\mathrm{n}=$
$\mathrm{p}=$ $\qquad$
$\mathrm{q}=$ $\qquad$
$P(X=k)=$

| \# shots made | 0 | 1 | 2 | 3 | 4 | 5 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| ${ }_{5} C_{k}$ |  |  |  |  |  |  |
|  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |

What is the probability that the player makes exactly three out of five 3-pointers?

What is the probability that the player makes at least 3,3 -pointers?

Example) A surfer has a $27 \%$ chance of riding a wave each time they paddle out and attempt to stand. The surfer makes 6 attempts to ride a wave. Complete the distribution table below to determine the probability that the surfer catches an even number of waves.
$\qquad$ $\mathrm{p}=$ $\qquad$

$$
q=
$$

$\qquad$
$P(X=k)=$

| \# of waves | 0 | 1 | 2 | 3 | 4 | 5 | 6 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| ${ }_{6} \mathrm{C}_{\mathrm{k}}$ |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
